DEPARTMENT OF FISH AND GAME  
Wildlife and Habitat Data Analysis Branch  
California Natural Diversity Database

**SPECIAL ANIMALS (817 taxa)**

July 2005

The California Natural Diversity Database (CNDDB) is a continually refined and updated, computerized inventory of location information on the most rare animals, plants, and natural communities in California. The blueprint used to set up the CNDDB was developed by The Nature Conservancy (TNC) in the early 1970's. The California program was started in 1979. TNC has helped to set up similar programs in all 50 states and a number of foreign countries. Collectively these programs are known as the Natural Heritage Network. The "Heritage Methodology" used by all of these programs sets the standards on the information we gather and the procedures we use. In 1999 TNC and the Natural Heritage Network jointly established an independent organization, the Association for Biodiversity Information (ABI), to achieve their mutual goal of using the wealth of biodiversity information in the Heritage Network to support conservation efforts. In November 2001 ABI changed its name to NatureServe. More information the Natural Heritage Network is available on the NatureServe web site: <http://www.natureserve.org>.

"Special Animals" is a general term that refers to all of the taxa the CNDDB is interested in tracking, regardless of their legal or protection status. These taxa generally fall into one or more of the following categories:

- Officially listed or proposed for listing under the State and/or Federal Endangered Species Acts.
- State or Federal candidate for possible listing.
- Taxa which meet the criteria for listing, even if not currently included on any list, as described in Section 15380 of the California Environmental Quality Act Guidelines. (More information on CEQA is available at [http://ceres.ca.gov/topic/env\\_law/ceqa/guidelines/](http://ceres.ca.gov/topic/env_law/ceqa/guidelines/))
- Taxa considered by the Department to be a Species of Special Concern (SC)
- Taxa that are biologically rare, very restricted in distribution, declining throughout their range, or have a critical, vulnerable stage in their life cycle that warrants monitoring.
- Populations in California that may be on the periphery of a taxon's range, but are threatened with extirpation in California.
- Taxa closely associated with a habitat that is declining in California at an alarming rate (e.g., wetlands, riparian, old growth forests, desert aquatic systems, native grasslands, vernal pools, etc.)
- Taxa designated as a special status, sensitive, or declining species by other state or federal agencies, or non-governmental organization (NGO).

Taxa marked with a “+” to the left of the scientific name are those for which there is location information in the CNDB Geographic Information System (GIS), as of the date of this list.

Additional information on the CNDB is available on the Department of Fish and Game web site at: <http://www.dfg.ca.gov/whdab/html/cnndb.html>.

Additional information on other Department programs is available on the DFG web site: <http://www.dfg.ca.gov>. The Habitat Conservation Planning Branch page: <http://www.dfg.ca.gov/hcpb/species/species.shtml> is a particularly rich source of information including such topics as “Survey Standards and Guidelines”, “Threats to Wildlife”, “Habitats”, and “Plant and Animal Pictures”.

#### **Element Occurrence (EO) Definition:**

The EO definition refers to the types of information we map. For most animal taxa, the CNDB is interested in sightings that indicate the presence of a **resident population**. For many birds, however, the CNDB tracks only nesting locations, (those species are so indicated on the list). It is not necessary to actually locate the nest to confirm breeding status. Any indication of breeding (territorial males, adults carrying nest material, adults carrying food, the presence of newly fledged young, etc.) is acceptable evidence of nesting. For other taxa where we track only a certain part of their range or life history, the area or life stage is indicated on the list.

#### **Mapping Conventions:**

Our information is mapped as precisely as possible, based upon the source materials available. Generally, observations/collections within ¼ mile, within continuous habitat, are combined into a single element occurrence (EO).

#### **Taxonomic References and Sources of Additional Information:**

We follow the most current published taxonomy. There have been a number of recent taxonomic changes that are reflected in this updated list.

For butterflies we followed the taxonomy used by NatureServe:

<http://www.natureserve.org/explorer/>

For fish we made changes based on the following:

Moyle, P. B. 2002. Inland Fishes of California. University of California Press.

For reptiles and amphibians, most of these changes are explained and referenced on the Center for North American Herpetology web site: <http://www.cnah.org>. In addition, we made taxonomic changes based on the following papers:

Feldman, C. R. & J. F. Parham. 2002. Molecular Phylogenetics of Emydine Turtles: Taxonomic Revision and the Evolution of Shell Kinesis. *Molecular Phylogenetics and Evolution* 22(3): 388-398.

Hollingsworth, B. D. 1998. The systematics of chuckwallas (*SAUROMALUS*) with a phylogenetic analysis of other iguanid lizards. *Herpetological Monographs* (12):38-191.

Mead, Louise S., David R. Clayton, Richard S. Nauman, Deanna H. Olsen, & Michael E. Pfrender. 2005. Newly Discovered Populations of Salamanders from Siskiyou County, California, Represent a Species Distinct from *Plethodon stormi*. *Herpetologica* 61(2): 158-177.

Reeder, T., C. J Cole & H. C. Dessauer. 2002. Phylogenetic Relationships of Whiptail Lizards of the Genus *Cnemidophorus* (Squamata: Teiidae): A Test of Monophyly, Reevaluation of Karyotypic Evolution, and Review of Hybrid Origins. American Museum Novitates No. 3365. 61pp.

Shaffer, H. Bradley, G. M. Fellers, S. Randal Voss, J. C. Oliver & Gregory B. Pauly. 2004. Species boundaries, phylography and conservation genetics of the red-legged frog (*Rana aurora/draytonii*) complex. *Molecular Ecology* (2004) 13, 2667-2677.

For mammals we made taxonomic changes based on the following papers:

Baker, R. J., L. C. Bradley, R. D. Bradley, J. W. Dragoo, M. D. Engstrom, R. S. Hoffman, C. A. Jones, F. Reid, D. W. Rice, & C. Jones. 2003. Revised Checklist of North American Mammals North of Mexico, 2003. *Museum of Texas Tech University Occasional Papers* 229:1-23.

Bean, C. 2003. An Assessment of the Endangerment Status of the Santa Cruz Kangaroo Rat. MS Thesis, San Jose State University.

Best, T. L., R. K. Chesser, D. A. McCullough, & G. D. Baumgardner. 1996. Genic and Morphometric Variation in Kangaroo Rats, Genus *Dipodomys*, from Coastal California. *Journal of Mammalogy* 77(3):785-800.

Jones, C. A. & C. N. Baxter. 2004. *Thomomys bottae*. *Mammalian Species* 742:1-14.

Matocq, M. D. 2002. Morphological and Molecular Analysis of a Contact Zone in the *Neotoma fuscipes* complex. *Journal of Mammalogy* 83(3):866-883.

Patton, J. L. & M. A. Smith. 1990. The Evolutionary Dynamics of the Pocket Gopher *Thomomys bottae*, with Emphasis on California Populations. *University of California Publications in Zoology* 123:1-161.

## **CNDDB RANKS:**

The CNDDB ranking codes are part of the “Heritage Methodology”. It is a shorthand formula that provides information about how rare a taxon is, both throughout its entire range and within California. We use the best information available to assign these ranks and they are changed and refined as new information becomes available. More detailed information on our ranks can be found in Appendix 1.

**CALIFORNIA ENDANGERED SPECIES ACT (CESA) LISTING CODES:** The listing status of each species is current as of the date of this list. The most current changes in listing status will be found in the list of “Endangered and Threatened Animals of California”, which the CNDDB updates and issues quarterly (January, April, July, & October).

SE State-listed as Endangered  
ST State-listed as Threatened  
SCE State candidate for listing as Endangered  
SCT State candidate for listing as Threatened

**ENDANGERED SPECIES ACT (ESA) LISTING CODES:** The listing status is current as of the date of this list. The most current changes in listing status will be found in the list of “Endangered and Threatened Animals of California”, which the CNDDB updates and issues quarterly (January, April, July, & October). Federal listing actions are also available at:

<http://www.epa.gov/fedrgstr/EPA-SPECIES/index.html>.

After careful consideration we have removed the USFWS Federal Species of Concern (FSC) designation from this list. The Federal Species of Concern list was not maintained on a statewide basis. The Sacramento field office, with jurisdiction over the central portion of California, maintained a list, but the Ventura, Carlsbad and Arcata offices did not. Therefore, species in the northern and southern parts of the state were not considered. Information on the list maintained by the Sacramento field office is available at:

[http://sacramento.fws.gov/es/spp\\_concern.htm](http://sacramento.fws.gov/es/spp_concern.htm)

FE Federally listed as Endangered  
FT Federally listed as Threatened  
FPE Federally proposed for listing as Endangered  
FPT Federally proposed for listing as Threatened  
FPD Federally proposed for delisting  
FC Federal candidate species (former Category 1 candidates)  
SC Species of Concern – list established by National Marine Fisheries Service (NMFS) effective 15 April 2004

## **IUCN CODES:**

**IUCN - The World Conservation Union**, through its **Species Survival Commission SSC** assess, on a global scale, the conservation status of species, subspecies, varieties and even selected subpopulations in order to highlight taxa threatened with extinction, and therefore promote their conservation. The SSC is firmly committed to providing the world

with the most objective, scientifically-based information on the current status of globally threatened biodiversity. The taxa assessed for the IUCN Red List have been evaluated using the [\*\*IUCN Red List Categories and Criteria\*\*](#). Detailed information on the IUCN and the Red List is available at: <http://www.redlist.org/>.

**OTHER CODES:**

**AFS:** American Fisheries Society categories of risk for marine, estuarine & diadromous fish stocks. These categories are taken from the paper: Musick, J.T. et al. 2000. "Marine, Estuarine, and Diadromous Fish Stocks at Risk of Extinction in North America (Exclusive of Pacific Salmonids). *Fisheries* 25(11):6-30. Species are categorized as vulnerable, threatened, or endangered, to global extinction. The Status of these organisms was determined by applying risk criteria developed from peer-reviewed knowledge and expert scientific opinion. These criteria are 1) rarity, 2) small range and endemics, 3) specialized habitat requirements, and 4) population resilience to decline. Most stocks face more than one risk factor. Life history limitations and habitat degradation are the two most important risk factors. This paper is available at:

<http://www.fisheries.org/html/fisheries/archive/FISHNOV06-30.pdf>

**Audubon: WatchList:** WatchList species are those facing population declines and/or threats such as habitat loss on their breeding and wintering grounds, or with limited geographic ranges. The WatchList is a science-based system that focuses attention on at-risk bird species so that limited resources are spent where they are most needed. More information is available at: <http://www.audubon.org/bird/watchlist/index.html>.

**BLM: Sensitive:** Bureau of Land Management. BLM Manual §6840 defines sensitive species as "...those species that are (1) under status review by the FWS/NMFS; or (2) whose numbers are declining so rapidly that Federal listing may become necessary, or (3) with typically small and widely dispersed populations; or (4) those inhabiting ecological refugia or other specialized or unique habitats." Existing California-BLM policy concerning the designation of sensitive species identifies two conditions that must be met before a species may be considered as BLM sensitive: (1) a significant population of the species must occur on BLM-administered lands, and (2) the potential must exist for improvement of the species' condition through BLM management. The "Sensitive Species" designation is not meant to include federally listed species, proposed species, candidate species or State-listed species. It is BLM policy to provide sensitive species with the same level of protection that is given federal candidate species. The list is available at [http://www5.or.blm.gov/Resources/Special-Status\\_species/CAIB99-86.htm](http://www5.or.blm.gov/Resources/Special-Status_species/CAIB99-86.htm).

**CDF: Sensitive:** California Department of Forestry and Fire Protection. The Board of Forestry classifies as "sensitive species" those species that warrant special protection during timber operations. The list of "sensitive species" is given in §895.1 (Definitions) of the California Forest Practice Rules. The Forest Practice Rules are available at:

<http://www.fire.ca.gov/ResourceManagement/pdf/2005FPRulebook.pdf#page2>

**DFG: CSC:** California Special Concern species. It is the goal and responsibility of the Department of Fish and Game to maintain viable populations of all native species. To this

end, the Department has designated certain vertebrate species as "Species of Special Concern" because declining population levels, limited ranges, and/or continuing threats have made them vulnerable to extinction. The goal of designating species as "Species of Special Concern" is to halt or reverse their decline by calling attention to their plight and addressing the issues of concern early enough to secure their long term viability. Not all "Species of Special Concern" have declined equally; some species may be just starting to decline, while others may have already reached the point where they meet the criteria for listing as a "Threatened" or "Endangered" species under the State and/or Federal Endangered Species Acts. More information is available on the Department's web site at: <http://www.dfg.ca.gov/hcpb/species/ssc/ssc.shtml>. All of the Species of Special Concern reports are now available on-line:

Birds: [http://www.dfg.ca.gov/hcpb/info/bird\\_ssc.shtml](http://www.dfg.ca.gov/hcpb/info/bird_ssc.shtml).

Mammals: [http://www.dfg.ca.gov/hcpb/info/mammal\\_ssc.shtml](http://www.dfg.ca.gov/hcpb/info/mammal_ssc.shtml).

Fish: [http://www.dfg.ca.gov/hcpb/info/fish\\_ssc.pdf](http://www.dfg.ca.gov/hcpb/info/fish_ssc.pdf).

Amphibians & Reptiles: [http://www.dfg.ca.gov/hcpb/info/herp\\_ssc.pdf](http://www.dfg.ca.gov/hcpb/info/herp_ssc.pdf).

**DFG: Fully Protected:** The classification of Fully Protected was the State's initial effort to identify and provide additional protection to those animals that were rare or faced possible extinction. Lists were created for fish, amphibians and reptiles, birds and mammals. Most of the species on these lists have subsequently been listed under the state and/or federal endangered species acts; white-tailed kite, golden eagle, trumpeter swan, northern elephant seal and ring-tailed cat are the exceptions. The white-tailed kite and the golden eagle are tracked in the CNDDDB; the trumpeter swan, northern elephant seal and ring-tailed cat are not.

The Fish and Game Code sections dealing with Fully Protected species state that these species "...may not be taken or possessed at any time and no provision of this code or any other law shall be construed to authorize the issuance of permits or licenses to take any fully protected" species, although take may be authorized for necessary scientific research. This language arguably makes the "Fully Protected" designation the strongest and most restrictive regarding the "take" of these species. In 2003 the code sections dealing with fully protected species were amended to allow the Department to authorize take resulting from recovery activities for state-listed species

More information on Fully Protected species and the take provisions can be found in the Fish and Game Code, (birds at §3511, mammals at §4700, reptiles and amphibians at §5050, and fish at §5515). Additional information on Fully Protected fish can be found in the California Code of Regulations, Title 14, Division 1, Subdivision 1, Chapter 2, Article 4, §5.93. The category of Protected Amphibians and Reptiles in Title 14 has been repealed. The Fish and Game Code is available online at: <http://www.leginfo.ca.gov/cgi-bin/calawquery?codesection=fgc>. Title 14 of the California Code of Regulations is available at: <http://ccr.oal.ca.gov>.

**FS: Sensitive:** USDA Forest Service defines sensitive species as those plant and animal species identified by a regional forester that are not listed or proposed for listing the federal Endangered Species Act for which population viability is a concern, as evidenced by

significant current or predicted downward trends in population numbers or density, or significant current or predicted downward trends in habitat capability that would reduce a species' existing distribution. Regional Foresters shall identify sensitive species occurring within the region. The list is available at:

[http://www.fs.fed.us/biology/resources/pubs/tes/fs\\_ss\\_1dec04.pdf](http://www.fs.fed.us/biology/resources/pubs/tes/fs_ss_1dec04.pdf)

More information is available at: <http://www.fs.fed.us/r2/nebraska/gpng/sensitive.html>.

**FWS: BCC:** Fish and Wildlife Service: Birds of Conservation Concern: The goal of the *Birds of Conservation Concern 2002* report is to accurately identify the migratory and non-migratory bird species (beyond those already designated as Federally threatened or endangered) that represent our highest conservation priorities and draw attention to species in need of conservation action. We hope, that by focusing attention on these highest priority species, this report will promote greater study and protection of the habitats and ecological communities upon which these species depend, thereby ensuring the future of healthy avian populations and communities. This report is available at:

<http://migratorybirds.fws.gov/reports/BCC02/BCC2002.pdf>

**USBC Watch List:** The United States Bird Conservation Watch List. Includes the Partners in Flight (PIF) Watch List, the United States Shorebird Conservation Plan Watch List, and the Waterbird Conservation for the Americas Watch List. This combined watch list is available through the American Bird Conservancy at:

<http://www.abcbirds.org/watchlist/index.htm>. Information on Partners in Flight is available at: <http://www.partnersinflight.org/>. Information on the United States Shorebird Conservation Plan is available at: <http://shorebirdplan.fws.gov/>. Information on the North American Waterbird Conservation Plan is available at: <http://www.pwrc.usgs.gov/nacwcp/testarea/nacwcp/pubs/continentalplan.cfm>.

**WBWG: High Priority:** The Western Bat Working Group is comprised of agencies, organizations and individuals interested in bat research, management and conservation from the 13 western states and provinces. The goals are (1) to facilitate communication among interested parties and reduce risks of species decline or extinction; (2) to provide a mechanism by which current information on bat ecology, distribution and research techniques can be readily accessed; and (3) to develop a forum to discuss conservation strategies, provide technical assistance and encourage education programs. Species designated as "High Priority" are imperiled or are at high risk of imperilment based on available information on distribution, status, ecology and known threats. More information is available at: <http://www.wbwg.org>.

**Xerces Society: Red list of pollinators:** The Xerces Society is an international non-profit organization dedicated to protecting biological diversity through invertebrate conservation. The Society advocates for invertebrates and their habitats by working with scientists, land managers, educators, and citizens on conservation and education projects. Their core programs focus on endangered species, native pollinators, and watershed health. More information on the Red list of pollinators is available at: <http://www.xerces.org/>

**INVERTEBRATES (365 taxa)****BIVALVIA** (clams and mussels)

|   |         |               |

<sup>3</sup> SC refers to the Species of Concern list established by NMFS effective 15 Apr 2004. The SC designation refers to the north DPS which includes spawning populations north of the Eel River (inclusive)

<sup>4</sup> The FPT designation refers to the southern DPS which includes all spawning populations south of the Eel River

<sup>5</sup> ESU = Evolutionarily Significant Unit

<sup>6</sup> The State listing is limited to Coho south of San Francisco Bay.

<sup>7</sup> The Federal listing is limited to naturally spawning populations in streams between Punta Gorda, Humboldt County and the San Lorenzo River, Santa Cruz County.

<sup>8</sup> Populations between Cape Blanco, Oregon & Punta Gorda, California.

<sup>9</sup> The Fish and Game Commission determined that the Coho from Punta Gorda to the Oregon border should be listed as Threatened in February 2004. As part of the normal listing process, this determination is currently under review by the Office of Administrative Law. The state listing includes the San Francisco portion of the federal Central California Coast ESU and the northern California portion of the federal So. Oregon/No. Calif. ESU

Special Animals list – July 2005

<sup>10</sup> All California steelhead belong to the subspecies *O.m.irideus*.

<sup>11</sup> This ESU includes all naturally spawned populations residing in streams between the Elk River in Oregon and the Klamath River in California, inclusive.

<sup>12</sup> CSC refers to California portion of ESU & refers only to the summer-run.

<sup>13</sup> Naturally spawned populations residing below impassable barriers in coastal basins from Redwood Creek in Humboldt County to, and including, the Gualala River in Mendocino County.

<sup>14</sup> CSC refers only to the summer-run.

<sup>15</sup> Federal listing includes all runs in coastal basins from the Russian River in Sonoma Co, south to Soquel Creek in Santa Cruz Co, inclusive. Includes the San Francisco and San Pablo Bay basins, but excludes the Sacramento-San Joaquin River basins.

<sup>16</sup> Federal listing includes all runs in coastal basins from the Pajaro River south to, but not including, the Santa Maria River.

<sup>17</sup> CSC refers to southern steelhead trout.

<sup>18</sup> Coastal basins from the Santa Maria River (inclusive), south to the U.S. – Mexico Border.

<sup>19</sup> CSC refers to southern steelhead trout.

<sup>20</sup> Federal listing includes all runs in the Sacramento & San Joaquin Rivers and their tributaries.

<sup>21</sup> Summer-run steelhead are part of both the Klamath Mountains Province ESU & the Northern California ESU.

<sup>22</sup> Federal listing refers to the Central Valley Spring-run ESU. It includes populations spawning in the Sacramento River & its tributaries.

<sup>23</sup> Central Valley fall/late fall-run ESU refers to population spawning in the Sacramento & San Joaquin Rivers and their tributaries.

<sup>24</sup> Originally proposed as part of a larger Southern Oregon & California Coastal ESU. This new ESU was revised to include only naturally spawned coastal spring & fall Chinook salmon between Redwood Creek in Humboldt County & the Russian River in Sonoma County.

<sup>29</sup> Newly described species from what was part of the range of *Plethodon stormi*.

<sup>30</sup> Formerly *Bufo microscaphus californicus*, now considered a full species.

<sup>31</sup> A recent mtDNA study concludes that *Rana aurora aurora* and *Rana aurora draytonii* should be recognized as separate species with a narrow zone of overlap.

<sup>32</sup> A recent mtDNA study concludes that *Rana aurora aurora* and *Rana aurora draytonii* should be recognized as separate species with a narrow zone of overlap, and that the range of *draytonii* extends about 100km further north in coastal California than previously thought.

<sup>46</sup> The subspecies *O. c. cremnobates* has been synonymized the *O. c. nelsoni*. Peninsular bighorn sheep are now considered to be a Distinct Population Segment.

## **APPENDIX 1**

## CNDDB RANKS

CNDDB ranks are shorthand formulas that provide information on the rarity of a species or subspecies, both throughout its global range and its range within the State. We use the best information available to assign these ranks and they are regularly updated as new information becomes available.

**GLOBAL RANKS:** Worldwide status of a *full species*: G1 to G5

G1 = Extremely endangered: <6 viable occurrences (EO's) or <1,000 individuals, or < 2,000 acres of occupied habitat

G2 = Endangered: about 6-20 EO's or 1,000 - 3,000 individuals, or 2,000 to 10,000 acres of occupied habitat

G3 = Restricted range, rare: about 21-100 EO's, or 3,000 – 10,000 individuals, or 10,000 – 50,000 acres of occupied habitat

G4 = Apparently secure; some factors exist to cause some concern such as narrow habitat or continuing threats

G5 = Demonstrably secure; commonly found throughout its historic range

**STATE RANKS:** Statewide status of a *full species or a subspecies*: S1 to S5

Same general definitions as global ranks, but just for the range of the taxa within California.

**T-RANKS:** Status of a *subspecies* throughout its range: T1 to T5

A subspecies is given a T-rank. This is attached to the G-rank for the full species. The S-rank, in this case, will refer to the status of the subspecies within California. The T-rank has the same general definitions as the global ranks.

EXAMPLES:

Island Fox (*Urocyon littoralis*) – **G1S1**

**G1** – *Urocyon littoralis* is extremely endangered throughout its worldwide range

**S1** – It is a California endemic, therefore its range within the state is the same as its worldwide range.

Yuma clapper rail (*Rallus longirostris yumanensis*) – **G5T3S1**

**G5** – *Rallus longirostris* is common in North American coastal salt marshes and the range extends down into South America.

**T3** – *R. l. yumanensis* is rare and has a restricted range within Mexico, Arizona, and California

**S1** – This subspecies is extremely endangered within California

Santa Cruz long-toed salamander (*Ambystoma macrodactylum croceum*) – **G5T1S1**

**G5** – *Ambystoma macrodactylum* is found throughout the Pacific northwest.

**T1** – The subspecies *A. m. croceum* is found only in California and is extremely endangered throughout its range.

**S1** – This subspecies is extremely endangered within California

OTHER NOTATIONS: applicable to G-ranks, S-ranks, and T-ranks

G1G3 = proper rank is most likely within this range of ranks

G2? = proper rank is probably G2

G? = we don't have enough information to rank the species

GH = all sites are historical; this species may be extinct, but further field work is needed

GX = species is extinct (SX = species is extirpated from California)

GXC = species is extinct in the wild, but it exists in cultivation

G2Q = species is endangered but there is some taxonomic question about the species
